

WAYFINDING

Signex Product Cut-Sheet

OVERVIEW -

This is a functional and intentional way of directing traffic. Wayfinding signage can be virtually any type of sign, but it must be unified by a singular wayfinding system. Wayfinding systems are both functional by the details they contain as well as artistic and an expression of clientele.

FUNCTION -

Braille and tactile signs include raised text, pictograms and braille. These components allow visually impaired individuals to navigate buildings.

VISTA SIGNS -

Our popular Vista signs can be modified to include braille and tactile. The clear acrylic cover holds the braille and tactile while the printed insert is still visible.

TEXTURE -

State-of-the-art textured vinyl allows you to create substrates that look and feel like marble, leather, wood and more.

LEGALITIES -

There are legal requirements that must be kept in mind during the designing process for Braille and Tactile signs. Light/dark contrast, font type, font-size, pictogram style and install location are regulated.
