

SIGN CABINETS

Signex Product Cut-Sheet

OVERVIEW -

Durable sign cabinets are built in geometrical shapes or form fit to curved shapes or patterns. The LED illuminated sign cabinet will adapt to unique types of lighting by illuminating either the complete face or the graphics and letters only.

DIMENSIONS -

Flex faces are so light that the sign cabinets can be virtually any shape and size. Lexan faces, however, are much heavier. They should be no more than 8 feet tall. Any face larger than this will sag under it's own weight.

COLORS -

All metal components, such as the cabinet and the retainers, can be custom painted to match any color. Vinyl comes in hundreds of different colors and shades. However, if a manufactured color isn't a close enough match, we can custom print any color.

LED LIGHTING -

LED lights are available in many many colors including green, amber, white, blue and red. Modules typically have an operational life span of 99,000 hours. They also come with a 5 year warranty and are CSA approved.

VINYL -

The cabinet face uses vinyl to display your brand. Printed vinyl can be used for photos or more complicated designs. Cut vinyl can be used for simpler designs that use only a few colors.
